SAI GLOBAL

The new Gazda 42" polisher is the world's largest. Delivering unsurpassed productivity, yet as easy to use as a single pad machine.

Two 53cm Pads

Two fully independent 53cm pad drives* with Gazda's patented pressure balancing system to guarantee both pads are always in full contact with the floor regardless of undulations. Variable pad pressure allows the machine to be tuned for best results on any brand of floor polish.

Closed Loop Engine Emission Technology

The steady delivery of fuels ensures that CO are minimized and maintained at safe levels, which is well below the workplace exposure standard determined by Safework Australia of 30ppm. The gas control fitted is designed to meet regulations including AS1425 (Automotive Gas Code).

Power Plus - 2500RPM

The Kawasaki 23hp engine and unique Gazda design combine to give 250rpm pad speed on the floor.

- High-performance fan forced dust control system with extra large capacity dust bags. Combined with the full surround skirt, means you don't have to re-sweep the floor after you buff, no dust build up on shelves & fittings.

- User friendly design makes it as easy to use as much as a single pad machine, ensuring maximum productivity throughout the shift.

- Tilt-back body allows you to change pads without having to tip the machine over.

- Ergonomic handle design for operator comfort.

- Simple on-board battery starting using a fully sealed battery that never needs maintenance.

- Super-Tough fully floating skirts designed to last for years.

- Durable cast iron wheels & pulleys designed to outlast the machine.

- Easy to use gas cylinder clamp that adjusts to any size cylinder with finger tip control.

- Operator instructions and service information are clearly labelled on the machine to minimize training.

- All components fitted are of the highest quality, and approved by the Australian Gas Association, as required by AS1425.

TECHNICAL SPECIFICATIONS

ENGINE: 23hp Kawasaki Engine

DRIVE PAD SPEED: 2500 RPM

PAD SIZE: Twin independent 53 cm pads

WEIGHT: 220 kg

BATTERY: 12volt, 20amp hours

BEST FOR:

- Airports
- Basketball courts
- Shopping centres
- Sports centres
- Supermarkets
- General large area burnishing

RECOMMENDED SURFACES:

- Vinyl
- Granite
- Marble
- Polished Concrete
- Terrazzo
- Most ultrahard floors
